

Post Procedure Instructions

- Do not shower for 2 days after your tattoo. Bathing is fine, but be very careful not to get your face wet. After two days, you may apply a very small amount of Vaseline to your brows and shower. Immediately after you finish your shower, blot off the Vaseline with a clean paper towel until they are completely dry. Do not rub. **Blot only.**
- Keep your eyebrows dry for 10-14 days.
- Do not use any soaps, cleansers, ointments, lotions, or water during this time.
- Avoid working out — including yoga or any other activity that causes you to sweat — for 10-14 days.
- Do not apply makeup near the tattooed area for 10-14 days.
- Do not touch, pick, or scratch.
- Avoid pools, oceans, saunas, hot tubs, and sun exposure until fully healed. Once healed, it is recommended that you use sunscreen on the area.
- Touch-ups – not earlier than 8 weeks after the initial procedure.

If you are planning a chemical peel, laser treatments, or an MRI, please let your practitioner know that you have cosmetic tattoos. Microblading pigments are an iron oxide base and could cause irritation with these treatments.

Please read before calling:

I wanted to explain a little about the healing process!

After the pigment is implanted, the body needs to do its job and repair itself. Tiny flakes of excess pigment will form on top of the skin and underneath the skin will retain pigment...

When the crust comes off the area might look very light (milky mask effect). You may wonder where the pigment is? The answer is simple: it takes up to 6 weeks for cells to regenerate, that's when the pigment returns to the surface of the skin and look more defined!

Please do not panic and let the body do the job.
