## **Full procedure explanation**

### Before Treatment

A full and in depth consultation is carried out at the time of your appointment to understand your skin suitability and realistic expectations of permanent make-up. All colors and shapes are customized to each person! I will always draw on first to make sure this is YOUR desired shape, no surprises! A consent form will be filled out to ensure we have all the medical information necessary for the procedure. Your photo will be taken and we will apply topical anesthetic cream to start your numbing process so you will be comfortable during the procedure and the initial measurements will be marked and drawn on first to make sure this is YOUR desired shape, color and get your approval before we start.

### During Treatment

A topical anesthetic will be re-applied during procedure keeping you comfortable. A fine disposable needle will be used to implant the dermatologically tested and state of the art pigments into the skin (NOT body art inks as they are not fit for a natural look on the face)

### After Treatment

When the treatment is finished some after-care cream will be applied. You will be advised on after care and will be given an after-care leaflet. The treatment area may feel sensitive. With eye liner or lip treatments you may have some swelling which should settle down within a few hours.

### Follow Up Treatment

You will be booked in for your follow up treatment to complete the final adjustments. (The perfecting visit) This will ensure that your enhancement will be beautiful. Your follow-up appointment should be scheduled no sooner than 6 weeks from your initial treatment.
